### SOYBEAN MEAL

Soybean meal is used in food and animal feed, mostly as a protein supplement, but also as a source of metabolizable energy.

Soybean meal is palatable, nutrient dense, high in digestibility, and a relatively consistent source of protein. It has an excellent amino acid profile and is a concentrated source of protein and energy.

There is no maximum for the use of soybean meal in dairy rations, and it can be fed to meet protein requirements. Normal feeding rates will be around 0.5-2kg per head per day.

Soybean meal can be fed mixed with silage in the paddock or on the feed pad. It can also be fed via the grain feeding system in the dairy shed.

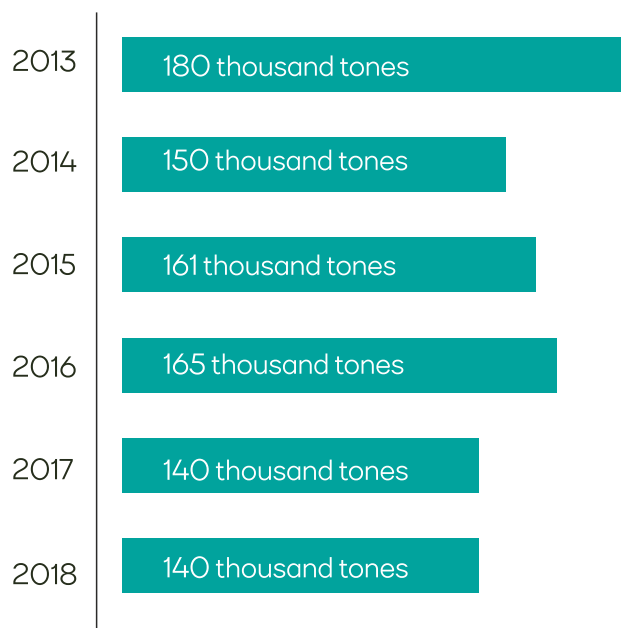

## SPECIFICATION OF SOYBEAN MEAL

protein %	46+-1
cellulose %	4+-1
ash %	5,5+-0,5
starch %	-
oil	1,5+-0,5
moisture	10+-1

## SOYBEAN CULTIVATION AREA IN TURKEY / HARVESTED AREA IN TURKEY

YEARS	CULTIVATION AREA	HARVEST AREA
2013	433 thousand decare	433 thousand decare
2014	343 thousand decare	343 thousand decare
2015	367 thousand decare	367 thousand decare
2016	382 thousand decare	382 thousand decare
2017	317 thousand decare	317 thousand decare
